

## **CSC-360: Interface Design**

### **Final Presentation Guidelines**

#### **Final Project Presentation Instructions**

Project: AI-Enhanced Interface Prototype, Implementation & Evaluation

Presentation Length: 8–10 Minutes

Format: Group Presentation

#### **Purpose of the Presentation**

The purpose of this presentation is to demonstrate your design process, AI tool evaluation, prototype quality, implementation functionality, usability findings, and critical reflection. You must clearly show both your design thinking and your working system.

#### **Required Presentation Sections**

- Title Slide – Project name, team members, and a one-sentence product description.
- Problem & Users – Refined problem statement, target users, and one primary persona.
- AI Tool Research & Selection – Two tools evaluated, why one was selected, one strength and one limitation, and sample AI-generated output.
- AI-Assisted Design Process – Initial AI output, issues identified, modifications made, and design principles applied.
- High-Fidelity Prototype – 3–5 key screens, user task flow, visual hierarchy, and accessibility considerations.
- Implementation Demonstration – Working interface, at least one complete task flow, and 2–3 implemented features (live demo preferred).
- Usability Testing Results – Participants tested, tasks assigned, major findings, severity of issues, and improvements made.
- Critical Reflection on AI – Where AI helped, where it was weak, accessibility/bias concerns, and future use considerations.
- Key Takeaways – Biggest design lesson, technical lesson, and insight about AI.

#### **Implementation Demo Expectations**

- Show a fully working interaction (not just clickable screens).
- Demonstrate at least one complete user task flow.
- Highlight accessibility features implemented.
- Explain differences between prototype and final implementation.

#### **Recommended Time Allocation (10 Minutes)**

- Problem & AI Tools – 2–3 minutes
- Prototype – 2 minutes
- Implementation Demo – 2–3 minutes
- Usability Results – 1–2 minutes
- Reflection & Takeaways – 1 minute

## **CSC-360: Interface Design**

### **Final Presentation Guidelines**

#### **Presentation Grading Criteria**

- Clarity and organization
- Depth of analysis and critical thinking
- Quality of working implementation demonstration
- Understanding of usability and accessibility principles
- Professionalism and timing

#### **Common Mistakes to Avoid**

- Spending too much time describing the idea instead of the process.
- Showing polished screens without explaining AI involvement.
- Demonstrating clicks without explaining interaction logic.
- Ignoring usability findings.
- Providing shallow reflection on AI usage.
